TechLaw Consultants Turns 40: Big Contracting Wins from EPA, DOD Highlight Celebration

CHANTILLY, Va. (Oct. 2, 2023) – TechLaw Consultants, Inc., is celebrating its 40th Anniversary today with key environmental contracting wins that give the company its largest work backlog in its history.

“We started 40 years ago with the notion that we could provide insightful expertise that would prove valuable to our clients, and I’m proud to say that still holds true—now, more than ever,” says TechLaw Consultants President and Chief Executive Officer Brian Shutler. “We are well positioned to launch our next phase of growth.”

TechLaw Consultants recently scored one of the biggest individual prime contracting wins in its history when the U.S. Environmental Protection Agency awarded the company’s TechLaw division a share of up to \$450 million to provide environmental consulting support in and around the Great Lakes under the EPA Superfund program. And within the last month, TechLaw became the only contractor to earn more than \$50 million in task order awards under EPA’s Environmental Services and Operations (ESO) contract. When combined with several recent contract and task order wins by TechLaw Consultants’ TLI Solutions division of U.S. Army Corps of Engineers work, the company now has a Federal government contracting backlog of more than \$175 million.

“It is a credit to our team members, who have faced so many challenges over the last few years, yet continued to deliver top-notch technical support that has been recognized by our clients,” says TechLaw Consultants Chief Operating Officer Patricia Derocher. “We are grateful, we are proud, and we are ready.”

Founded on Oct. 1, 1983, as TechLaw, Inc., by some of EPA’s earliest employees, the company has steadily grown and evolved from a two-office shop into a nationwide, employee-owned environmental consulting firm of more than 175 employees and 12 offices. TechLaw Consultants, Inc., operates three divisions: TechLaw, which focuses on supporting U.S. EPA and several state agency clients; TLI Solutions, which focuses on supporting the U.S. Army Corps of Engineers and the U.S. Department of Energy; and AlterEcho, which primarily supports private-sector and not-for-profit clients.

For the TechLaw division, the capture of a portion of the Superfund Great Lakes Architecture and Engineering Services (SFGLAES) contract allows the company to play a pivotal role in helping EPA

streamline and accelerate Superfund site cleanups and Great Lakes Legacy Act (GLLA)-contaminated sediment cleanups. At the same time, TechLaw also supports EPA Superfund remediation nationwide under ESO, while also providing scientific laboratory support to Superfund in four of 10 regions under EPA Environmental Services Assistance Team contracts. TechLaw personnel are also currently in Maui, providing emergency response support to communities affected by the recent wildfires.
