TechLaw Awarded \$74.6M in Superfund Laboratory Contracts; Company Remains Largest Contractor for Vital EPA Program

Repeat awards in four EPA Regions through 2031 maintain TechLaw's status as the leading support contractor under EPA's Environmental Services Assistance Team (ESAT) program

CHANTILLY, Va. (Oct. 14, 2026) – The U.S. Environmental Protection Agency has awarded TechLaw Consultants, Inc. (dba TechLaw), Superfund environmental laboratory support contracts valued at a combined \$74.6 million spanning four EPA regions nationwide. The first of the 5-year awards began rolling out this month, with all four contracts remaining in place through 2031.

“We are proud of the work we’ve been doing for EPA and look forward to continuing that partnership to protect the environment,” says TechLaw Consultants Chief Operating Officer Patricia Derocher. “We have a great team of scientists who are committed to building on our 25-year record of outstanding environmental laboratory support to the Superfund program.”

The four awards were made under EPA’s Environmental Services Assistance Team (ESAT) program, which provides specialized laboratory, field, analytical, and quality assurance support to each of 10 EPA regional environmental programs—including Superfund site assessment and remediation activities. All four awards represent re-awards of long-held TechLaw contracts with EPA. They include:

- EPA Region 1 (New England region, based in North Chelmsford, MA) – \$7.3 million
- EPA Region 2 (Northeast region and Puerto Rico, based in Edison, NJ) – \$29.2 million

- EPA Region 8 (Mountain West region, based in Denver, CO) – \$30.9 million
- EPA Region 10 (Pacific Northwest region and Alaska, based in Port Orchard, WA) – \$7.2 million

Through the ESAT program, TechLaw provides multidisciplinary teams of chemists, biologists, geologists, and environmental scientists to deliver specialized services encompassing: organic and inorganic chemical analysis; analytical data validation; biological testing; laboratory operations; field sampling support; and environmental quality assurance. These services provide EPA with scientifically defensible analytical data and technical expertise essential to assessing environmental contamination, evaluating potential risks to human health and the environment, and supporting effective site cleanup decisions.

TechLaw has now won a cumulative total of 18 ESAT regional contracts worth more than \$200 million, dating back to its first award in EPA Region 10 in 2001. It has held ESAT contracts in Regions 1 and 8 since 2006 and in Region 2 since 2016. TechLaw continues to hold the largest share of ESAT contracts by number and dollar value, and currently has the most overall corporate ESAT experience of any contractor.
